

Su Jiansheng

AI Engineering Leader / Director of Engineering | Shenzhen (Bao'an), China

+86 181-8862-8264 | sjs1919@qq.com | WeChat 134-1072-8779 | Availability: negotiable (currently employed) | 20 years in software R&D · 10 years managing technical organizations

PROFESSIONAL SUMMARY

Engineering leader with 20 years in software R&D and 10 years managing technical organizations. Have shipped production systems across consumer finance, cross-border e-commerce, and smart manufacturing. Over the past two years, drove AI engineering from experimentation to delivery—led a 6-person squad to ship a multilingual, multi-currency cross-border storefront in 3 weeks (vs. typical 6), and scaled Agent-based systems from personal validation to a team-wide engineering capability. Turn technical capability into measurable business outcomes.

KEY ACHIEVEMENTS

- Delivery velocity:** Led a 6-person squad to ship the lexy storefront in 3 weeks (vs. ~6 typical, ~50% faster); compressed test cycle from 2–3 weeks to ~1 week.
- Operations efficiency:** Built a system managing 700+ devices at 7×24 unattended; reduced ops shift staffing from 5 (3 shifts) to 2 (2 shifts), freeing ~3 person-years per year of watch duty.
- Cost optimization:** Halved delivery schedule and labor cost on lexy via AI-driven workflow; built an internal token-hub multi-model routing gateway for AI cost optimization (routed by quota/cost; not commercialized).
- Risk governance:** Led cross-department compliance documentation for financial MLPS Level 3 (China's graded cybersecurity protection); built the proprietary "Tiancheng" risk-control system (anti-fraud, scorecard, multi-loan, blacklist, credit-limit control—full client-side chain, with proprietary IP); established Agent governance (RBAC / audit / guardrails).
- Talent development:** Built teams across three scenarios (from 0, 30+→150+, and turnaround); mentored 4 leads, 3 key engineers, 1 consecutive promotion; 6 AI training sessions, 200+ attendees.

CORE COMPETENCIES

- AI strategy & delivery:** Proved the Vibe-Coding path → shipped lexy to production (3 weeks, launched Russia Jun 2026) → manufacturing Agent scheduling engineering validation + governance → 6 trainings, 200+ people.
- Organization & talent scaling:** Three team-building scenarios (0→150+, turnaround); biweekly iteration + performance data chain; 4 leads / 3 key engineers / 1 promotion.
- Engineering & architecture:** Spring Cloud microservices + hybrid-cloud DevOps; financial MLPS Level 3; 700+ devices 7×24, multi-cluster/multi-region evolution; self-built token-hub gateway (10+ models, unified routing / billing / failover) + Agent evaluation loop.

EXPERIENCE

Future Factory Technology | R&D Director | 2022.04 – Present

- Turned around a multi-function R&D organization (product / Java / QA / big-data / ops); built the production operations OS from 0 to 700+ devices at 7×24 unattended.
- Shifted R&D from fire-fighting to system-driven delivery: biweekly iteration load stabilized at 70–90%, performance data chain established; cut key-demand slippage from 2 months to on-cadence.

- Secured the executive mandate for full AI-coding production rollout via self-validation + small-scale best practices + incremental feasibility, then launched lexy.
- Led a 6-person squad to deliver a multilingual, multi-currency e-commerce storefront (lexy) in 3 weeks (vs. ~6); launched in Russia Jun 2026; produced a reusable AI delivery playbook.
- Completed a 4-week deep dive across the full Agent stack (ReAct → LangGraph → Supervisor → Token Exchange auth/permission/audit), establishing **team-level engineering validation (not yet scaled to production—disclosed)**.
- Built the talent pipeline via values + performance review: 4 leads, 3 key engineers, 1 consecutive promotion; organized 6 AI trainings, 200+ attendees.

Lvxin Group (under Greenland Financial) | Sr. Architect → R&D Director | 2016.11 – 2022.03

- Led the Spring Cloud re-architecture, migrating .NET core systems to Java, supporting ¥60B loan origination / 43M customers / 87+ fund partners / 40+ traffic partners.
- As R&D Director, organized the R&D department to complete an MLPS-driven platform overhaul: physical → virtual + public-cloud hybrid; CI/CD + Docker containerization; network security hardening; file storage to OSS (resolved lock-block stalls), sustaining ¥10B/day throughput.
- Drove cross-department compliance documentation for financial MLPS Level 3 (R&D-side lead), supporting certification.
- The "Fenghuang" business system and "Tiancheng" risk-control system (client-side full chain: anti-fraud / scorecard / multi-loan / blacklist / credit-limit) obtained proprietary IP.
- Promoted from Sr. Architect to R&D Director; grew the team from 30+ Java engineers to 150+ cross-functional.

Shenzhen Boshida Supply Chain | Technical Director | 2015.10 – 2016.10

- Built cross-border import e-commerce (zhuagou) customs filing, clearance, ERP, and single-window declaration modules from 0, enabling cross-border operations.

Tencent MIG | Sr. Developer / Team Lead (3× Tencent stock grants) | 2011.09 – 2015.09

- Led a team delivering the city-services online business-hall core module; architected a tens-of-millions-scale high-concurrency system (45M bound users / 11M MAU / 12M daily PV).
- Promoted T2.3 → T3.2; granted Tencent stock 3 times.

Kingdee | Sr. Developer / Project Manager | 2006.10 – 2011.09

- Designed and delivered the CRM core module; supported group customer-management business; 2010 CRM project won the group innovation award; 4 of 7 reviews rated excellent.

EDUCATION & OTHER

- Education:** Wuhan University (985 / 211) | B.S. Software Engineering | 2003.09 – 2007.07
- AI tech stack:** Go / Java / Python; Spring Cloud / LangGraph (StateGraph orchestration) / MCP Server; token-hub (multi-model routing, 10+ models incl. Claude / Gemini / OpenAI + GLM / Kimi / DeepSeek / Qwen, serves 24 R&D, AI cost optimization) / RAG (retrieval-augmented) / Agent evaluation loop; RBAC / audit / guardrails.
- Certifications:** PMP; multiple outstanding-employee / outstanding-manager awards; equity incentives.
- Cross-industry path:** ERP → internet → cross-border e-commerce → consumer finance → smart manufacturing → AI engineering.
